

# Contents

<b>1</b>	<b>Introduction</b>	<b>7</b>
1.1	What is a translation surface? . . . . .	7
1.2	Examples . . . . .	20
<b>2</b>	<b>Basic topological and geometrical aspects</b>	<b>43</b>
2.1	Topological classification of surfaces . . . . .	43
2.2	Covering spaces . . . . .	45
2.3	Singularities of translation surfaces . . . . .	50
2.4	Geometric limits . . . . .	57
<b>3</b>	<b>Symmetries</b>	<b>61</b>
3.1	Analytic automorphisms: isometries and translations . . . . .	61
3.2	The Veech group . . . . .	65
3.3	Cut-and-paste constructions . . . . .	66
3.4	$G$ -coverings . . . . .	70
3.5	Hooper-Thurston-Veech construction . . . . .	76
3.6	Application to the baker's surface . . . . .	80
<b>4</b>	<b>Translation flows</b>	<b>83</b>
4.1	Translation flows and interval exchange transformations . . . . .	83
4.2	Málaga maps . . . . .	88
4.3	The jungle of infinite interval exchange transformations . . . . .	88
4.4	Entropy . . . . .	94
4.5	Parabolicity . . . . .	97
4.6	Criteria for completeness of the flow . . . . .	100
<b>5</b>	<b>Recurrence and diffusion</b>	<b>103</b>
5.1	Recurrence in finite area . . . . .	103
5.2	The boxes lemma . . . . .	105
5.3	Recurrence in periodic and non-periodic windtree models with $a = b = 1/2$ . . . . .	106
5.4	Recurrence in $G$ -coverings . . . . .	109
5.5	Hooper-Thurston-Veech . . . . .	113
5.6	Diffusion rate and quantitative recurrence in $G$ -coverings . . . . .	114
<b>6</b>	<b>Invariant sets and invariant measures</b>	<b>119</b>
6.1	Ergodicity and non-ergodicity of $G$ -coverings . . . . .	119
6.2	Hooper-Thurston-Veech . . . . .	122
6.3	Minimality . . . . .	125
6.4	Typical minimality and ergodicity from approximation by compact surfaces . . . . .	130
6.5	Remarks . . . . .	132
<b>A</b>	<b>Background on dynamical systems</b>	<b>133</b>
A.1	Topological dynamics and measurable dynamics . . . . .	133
A.2	Invariant measures of topological systems . . . . .	133
A.3	Recurrence . . . . .	134
A.4	Skew-products . . . . .	135

<b>B</b>	<b>Group action and the hyperbolic plane</b>	<b>139</b>
B.1	Approximation in Fuchsian groups . . . . .	139
B.2	Rosen continued fractions for $G_\lambda$ . . . . .	140
<b>C</b>	<b>Compact translation surfaces</b>	<b>145</b>
C.1	Interval exchanges and suspensions . . . . .	145
C.2	Keane theorem and closed invariant sets . . . . .	145
C.3	Deviation of Birkhoff averages and diffusion . . . . .	146
C.4	Ergodicity and invariant measures . . . . .	147
C.5	Oseledets theorem for KZ (Chaika-Eskin) . . . . .	147
<b>D</b>	<b>Eigenvalues of infinite graphs</b>	<b>149</b>
<b>E</b>	<b>Discussion to have, open problems to solve</b>	<b>151</b>
E.1	Possible places to cut . . . . .	151
E.2	Ends of coverings . . . . .	151
E.3	Non-commutative KZ cocycle . . . . .	151
E.4	Potential examples for the introduction . . . . .	151
E.5	The metrics on flat surfaces of infinite type . . . . .	152
E.6	Huge coverings . . . . .	152
E.7	Panov plane . . . . .	152
E.8	Ehrenfest . . . . .	153
E.9	Non-abelian coverings . . . . .	153
E.10	Further questions . . . . .	153
